

Revisions:

2. Improvements in all Resource Areas - ecosystem, water quality, levee system integrity, and water supply reliability. **Progress in each area needs to be linked to progress in all other elements. Actions in Stage 2 proceed if there is reasonable progress for all resource areas in Stage 1.**

3. [Delete]

[Old 4] 3., first bullet

- Result in improvement for all resource areas

[Old 8] 7. Water Supply Reliability

- **Aggressive implementation of water transfer and water use efficiency program elements**
- **Groundwater storage will be evaluated and implemented**
- **Surface storage. Surface storage is evaluated as part of the mix of available water management options and will be constructed if predefined conditions are met:**
 - **Demonstration of water supply need after economic evaluation**
 - High level of water use efficiency
 - Demonstrated progress on water transfer framework
 - Groundwater and conjunctive use - demonstrated progress subject to local restrictions
 - Beneficiary financing commitment
 - Complete 404(b)(1) compliance
 - Site specific environmental documentation

- [Old 9] 8.....

- [Fifth bullet] Initiate environmental documentation and feasibility analysis for Stage 1 actions
- [Ninth bullet] Extend the Bay-Delta Accord to provide operational and environmental stability
- [Tenth bullet] Resolve permitting issues on south Delta improvements for implementation in Stage 1
